WSLRW-TCK is LoRaWAN wireless transmitter with modular design connected to Thermocouple temperature sensor, based on 10-year experience in design and manufacturing Industrial sensor of Daviteq Company. It has been factory pre-calibrated for high accuracy and quick set-up. The Ultra-Low Power design and smart firmware allow the sensor to last up to 10 years with 02 x AA battery (depending on configuration). The sensor will transmit data over kilometers away to the LoRaWAN gateway, any brand on the market. Some typical applications are temperature monitoring for factories, agriculture, boilers,...

Applications

Temperature Monitoring, Process Monitoring, Safety Monitoring

Notes For Applications

When selecting a thermocouple transmitter node, consider the following criteria:

- **Temperature Range:** Determine the required measurement temperature range for your application.
- **Chemical Resistance:** Assess the compatibility and durability of the thermocouple wires with the environment where they will be exposed.
- **Abrasion and Vibration Resistance:** Choose a transmitter that can withstand abrasion and vibration in your specific installation.
- **Installation Requirements:** Consider existing equipment and available probe hole sizes to determine the appropriate probe diameter.
